Agile, Jira, Software Development Process, Github, Git, Azure, Cloud Development

Professional Experience

10/2022 – present
jacksonville,
United States

Full Stack Software Engineer 1, *Beeline*

- Implemented adding new infrastructure to the existing monolith code base to help alleviate the stress of older batch processes.
 - Some processes are service bus eventing with Azure event grid.
- Helped to create and manage multiple mid-sized applications for microservices in digital transformation.
- Created and maintained Infrastructure as Code for Microsoft Azure Event grids, subscribers, and storage queues.

05/2022 – 10/2022
jacksonville,
United States

Full Stack Software Engineer Intern, *Beeline*

- Implemented Software changes on screens that are being used by the company's highest-level clients such as Meta, Amazon, and JP Morgan Chase.
- Developed Restful APIs with Asp.Net 5 and C#
 - APIs being used from the main application to improve the processing time of batch imports drastically.
- Translated SQL Stored Procedures to C# classes
 - Allowing for code to be more centralized and to improve upon processing efficiency

08/2021 – 05/2022
Jacksonville,
United States

Front End Developer, *Perspective Inc*

- Lead Front End Developer
- Working with a team of developers to make deadlines and deliver a professional site
- Helped in front-end development of social media website.
